TestROC

This analysis is still in development: The format of results may change in future releases. Please report any errors or requests [here](#)

Welcome to PsychoPDA's Test ROC analysis To get started:

1. Place the responses in the 'Dependent Variable' slot
2. Place the classification in the 'Class Variable' slot
3. [Optional] Place a grouping variable in the 'Grouping Variable' slot

If you encounter any errors, or have questions, please see the [documentation](#).

If this software is used in conducting published research, please do provide a citation using the information at the bottom of the analysis.

TestROC

Procedure Notes

The TestROC optimal cutpoint analysis has been completed using the following specifications:

Measure Variable(s): madsr11

Class Variable: depa1_DEP NOW

Positive Class: Depressed

Method: maximize_metric

All Observed Cutpoints: TRUE

Metric: prod_ppv_npv

Direction (relative to cutpoint): >=

Tie Breakers: c

Metric Tolerance: 0.05

For more information on how calculations are performed and interpreting results, please see the [documentation](#)
